It's been a while since the news broke that Chuck Schuldiner of Death, who killed himself in 1995, was once a member of a band called Torment. But now that he's back, he's not so sure about one thing: that he should've been a permanent member. As Anselmo tells Revolver magazine, "When I see the band still playing — like I just saw them play — I'm gonna have a chat with Chuck, that's for sure. I want him to be involved in my band, be there and be involved with me. But the timing, when he passed away, I can't take it. He was a close friend and a real brother to me. But

now I can do the job and we can still be together. I can't have my best friend." Chael and Chuck, of course, went to school together in Tallahassee, Florida. And Anselmo and Schuldiner went through a lot together. "We were like brothers," says Anselmo. "I went through a lot of things with Chuck." Schuldiner passed away in 1997. When I see the band still playing — like I just saw them play — I'm gonna have a chat with Chuck, that's for sure. I want him to be involved in my band, be there and be involved with me. But the timing, when he passed away, I can't take it. He was a close friend and a real brother to me. But now I can do the job and we can still be

together. I can't have my best friend."

What's New In?

Figure 1: Markup Import (available only for Windows) Importing feedback is now as easy as dragging and dropping. The Markup Import tool automatically applies formatting, styles, and text corrections, as well as changing some of the information on your drawing. You can view the feedback in real time to decide which changes you want to make to your drawing. When you select a symbol in your drawing and start to type,

the tool quickly loads the feedback that applies to the selected symbol or symbol group. By default, the tool loads the feedback from the most recent drawing you opened and it only searches for recent updates. You can also choose to ignore any feedback that doesn't apply to your drawing and then manually edit the feedback to your liking. This lets you clean up or customize feedback that you don't want to add to your drawing.

Figure 2: Markup Import dialog Figure 3: Markup Import tool Figure 4: Markup Import tool options • Choose to ignore the last file used. You can ignore recent files, and then manually edit the feedback you get from the most recent

file. • If you change or add text in your drawing, the tool also updates the feedback text on the displayed symbol or group in the drawing window. • Choose the date range to search for updates. You can use the optional search expression to narrow the search. This search can be very specific, so you can find a particular error from a long time ago. For example, if you're working on a drawing that you started back in the 1990s, you can search for specific errors from that era. Figure 5: Search expression for specific errors • Use the "Search in scratch pad" option to search for specific text within your drawing. • If you start typing while in the Markup

Import tool, the tool uses the text you type as a search expression and automatically loads feedback from symbols that match your search. • You can also display feedback on a symbol or group with a specific id from other drawings. • You can also view feedback on a symbol that doesn't have a symbol type. This lets you search for other symbols that use similar text or symbols. • When you search for a text string, the tool displays a new search box, where you can change the search expression or stop the search. • When you click the Search button,
